

Environmental Policy

Euronova Refrigeration AB is a company in the commercial refrigeration business with focus on energy efficient refrigeration systems.

Our mission is to meet our customer needs for products for the refrigeration business while we make sure to create a long term energy system in our society.

To Euronova Refrigeration AB this means:

- Our most important contribution to the environment is to deliver products with high energy efficiency and quality to minimize the carbon dioxide emission.
- While developing our refrigeration systems our goal is to reach the highest level of energy efficiency possible.
- We select refrigerant with the least environmental influence.
- We are always using the best components on the market to make a good product.
- A factory test of our products is done every time before delivery to our customers. This is done so that we can ensure a high energy efficiency and good quality of the product.
- A long life cycle for our products will minimize the environmental effects
- Our goal is that our products should be the best long term environmental choice for our customers.
